Approximately 50 percent of the world's hydrothermal features are at Yellowstone National Park, creating an effect that makes the ground appear to be on fire. The most famous of all the geysers is Old Faithful, one of the most popular and recognized natural wonders in the United States.

Yellowstone - Mammoth Hot Springs - Upper West Yellowstone National Park - Old Faithful Geyser

One of the biggest advantages of entering Yellowstone from the west is the opportunity to see wildlife along the Madison River. Elk and bison are frequently spotted here, along with occasional sightings of bears and bald eagles. Old Faithful erupts more frequently than any of the other big geysers, although it is not the largest or most regular geyser in Yellowstone National Park. It is believed this regularity is in part due to no known connection with other hydrothermal features in the area
